WebStorm 7 EAP

Early Access Program for JetBrains WebStorm 7

WebStorm 7.0.3 (build 133.434) is available for download. Active license is required.

What's New in WebStorm 7

- Completely redesigned JavaScript debugger backend for Chrome based on WebKit Remote Debugging Protocol, as well as for Node.JS based on the V8 protocol
- Redesigned Live Edit (now works in the context of a debug session)
- "Elements" tab in the JavaScript debugger, showing the live HTML contents of the page being debugged
- Simplified Node.js remote debug — you don't need to specify local directory and remote path.
- Stylus support
- Compass support
- NPM integration
- Integration with Karma test runner (note: currently works only with karma@canary, the latest development version)
- Integration with Istanbul code coverage engine
- Bundled plugin for Mustache and Handlebars templates support
- Support for EJS templates
- Initial support for Web Components
- Support for TypeScript 0.9
- New structure view for less/sass/scss
- Breadcrumbs in less/sass/scss
- Suppressible inspections in css/less/sass/scss
- New css intentions for colors conversion
- Configurable built-in web server port (http://youtrack.jetbrains.com/issue/WEB-6998)
- Built-in web server supports custom host name
- Debugging asynchronously loaded js content is possible, we support jquery.getScript (http://youtrack.jetbrains.com/issue/WEB-2442)
- New JavaScript intentions: "Convert for loop to forEach call on array", "Simplify array creation"
- Improved completion for parameters of getElementById()
- Code insight support for package.json files
- Redesigned REST Client UI with support for requests history, import/export, compressed responses and other improvements
- Internal refactorings and code cleanup to enable faster development of new features and framework integrations

New Platform Features in WebStorm 7

- Recent projects in dock context menu on Mac OS X
