

Common Administration Tasks

Changing bundled Tomcat listening port

Find the `<Connector port="8080" protocol="HTTP/1.1"` text in `conf\server.xml` file. Change 8080 to any other convenient port.

Crash recovery

If License Server fails to start with "Another instance of Derby may have already booted the database" message in `catalina.out`:

- Shutdown Tomcat.
- Remove file `db/db.lock`.
- Restart Tomcat.

License Server should boot fine and recover the database.
