

JetBrains Runtime

JetBrains Runtime is a runtime environment for running IntelliJ Platform based products on Windows, Mac OS X, and Linux. JetBrains Runtime is based on OpenJDK project with some modifications. These modifications include: Subpixel Anti-Aliasing, enhanced font rendering on Linux, HiDPI support, ligatures, some fixes for native crashes not presented in official builds, and other small enhancements.

JetBrains Runtime is not a certified build of OpenJDK. Please, use at your own risk.

[This page](#) has instructions how to change the java runtime for IntelliJ IDEA Platform based IDEs. Current java runtime version can be verified in IDE's About screen.
