

# dotPeek Keyboard Shortcuts

dotPeek has inherited a great deal of its functionality from [ReSharper](#). Keyboard shortcuts used in dotPeek are no exception: similar to ReSharper, dotPeek provides two sets of keyboard shortcuts:

- Visual Studio scheme that was initially introduced in ReSharper in order to minimize conflicts with Visual Studio's own keyboard shortcuts.
- IntelliJ IDEA scheme that shares the majority of shortcuts with those used in [IntelliJ IDEA](#) and its [derivative web development IDEs](#). This provides a common keyboard-centric experience among all JetBrains development environments.

You can select one of the two keyboard schemes in dotPeek by going to Tools > Options > Environment > General. As of dotPeek 1.0, you can't customize any of the two schemes. In future releases, we're looking to improve in this direction.

Keyboard shortcuts provided by the two dotPeek keyboard schemes are listed below.
