

Calcutta 4.1 EAP (build 8804) Release Notes

This release contains a number of new features as well as many enhancements and fixes.

Perforce Support in Visual Studio

In addition to TFS and Subversion we are adding Perforce support to TeamCity Addin for Visual Studio. The single requirement is just to have p4.exe on the workstation. Supported are both remote runs and pre-tested commits.

Setup your perforce connection settings on "Perforce" tab and filter files by changelist: pre-tested commit is at your disposal.

Please [let us know](#) if you tried the plugin and want to propose an enhancement or found an issue.

XML Reporter

We are bundling the functionality to process various XML reports and feed data to TeamCity. Previously, this was available as a separate plugin.

Supported report formats are:

- Ant's JUnit task
- NUnit
- Surefire
- PMD
- FindBugs

Please note that you need to use JUnit, NUnit and Surefire reports only if your tests are not recognized by TeamCity automatically (otherwise you will get duplicating test reports).

Test will be reported as soon as the data is dumped to the disk (not waiting for the build to finish).

PMD and FindBugs reports are displayed in the same Inspections browser that we have for IntelliJ IDEA-powered Inspections runner.

You can also import several reports in a single build using `service messages` ([read more](#)).

Test Details and Problematic Tests on Project Level

Now you can investigate behavior of a single test across different build configurations. This can be useful in pinpointing flaky tests. Also, Problematic Tests are now available on the project level.

Test History			
Test status	Duration	Build Info	
Failure	5s,575ms	IntegrationBuild (Solaris)	#2545 Tests failed: 1 (1 new), passed: 2523, igr
OK	5s,524ms	IntegrationBuild (FreeBSD)	#1038 Tests passed: 749, ignored: 18 ▾
OK	5s,524ms	IntegrationBuild (Linux)	#3459 Tests passed: 820, ignored: 18 ▾
Failure	5s,551ms	IntegrationBuild (MySQL)	#12749 Tests failed: 1 (1 new), passed: 3551, igr
OK	5s,514ms	IntegrationBuild (Solaris)	#2544 Tests passed: 3821, ignored: 43 ▾
OK	5s,522ms	IntegrationBuild (MySQL)	#12747 Tests passed: 3552, ignored: 26 ▾
OK	5s,530ms	IntegrationBuild (Oracle)	#2511 Tests passed: 3557, ignored: 26 ▾
OK	5s,515ms	IntegrationBuild (MSSQL2005)	#1740 Tests passed: 3557, ignored: 26 ▾
Failure	5s,565ms	IntegrationBuild (Solaris)	#2543 Tests failed: 1 (1 new), passed: 3820, igr
OK	5s,516ms	IntegrationBuild (PSQL)	#3385 Tests passed: 3557, ignored: 26 ▾
Failure	5s,553ms	IntegrationBuild (Linux)	#3458 Tests failed: 1 (1 new), passed: 3827, igr
OK	5s,514ms	IntegrationBuild (MySQL)	#12746 Tests passed: 3552, ignored: 26 ▾

Test List Grouping

Tests of a build now can be grouped by package and test case (use "Group by package/class" checkbox in the table title):

Overview
Changes (1)
Tests
Build Log
Build Parameters
Dependencies

Total test count: **3919**; total duration: **2h:10m**

Find: | Found **90** tests; duration: **1m:21s** Group by package/class:

Status	Test	
	SVN Suite: jetbrains.buildServer.buildTriggers.vcs.svn	1
	ExtendedRevisionTest	
OK	should_normalize_data	
OK	should_normalize_data_HEAD	
OK	should_parse_revisions	
	ExternalsCacheTest	
OK	test	
	GetFileContentTest	
OK	testGetContentForExternals_1_5_ver2	
OK	testGetContentForExternals_ExternalsDisabled	

The feature has just been introduced and is likely to evolve in the next EAP releases.

All Users Group

A predefined group "All Users" is introduced that contains all users. Now the roles assigned to new users can be conveniently managed by assigning the roles to the group.

There is a known issue in this EAP release: new users will still directly get the roles that default user had during upgrade to this build. You may want to remove all the default user roles prior to the server upgrade. Another point worth attention is that all users are automatically subscribed to Email notification to watch builds with own changes. This notification can be turned off by a user: just add "Watch builds with my changes" notification rule with no events selected.

These issues will be fixed in the next EAP release.

Another point is that every user now got the roles assigned to default user (the role is forced from the All Users group). If this is not desired behavior, please edit the roles of All Users group.

Other Improvements

- Ability to add comment on pausing a build configuration
- Administrators can now edit notification rules of individual users
- New Extension point for managing build starting conditions
- Projects popup and several other project choosers now have filter to speedup project selection
- Fixes in Subversion support
- Support for NUnit 2.5 Beta 2
- Personal builds of build chains now support starting several builds which has a common part of the build chain
- Personal builds now display comment on the build results page
- NUnit tests are now supported in Mono xbuild ([MSBuild runner](#))
