

Darjeeling EAP Release Notes (build 10522)

Fixes and improvements:

- Agents running on Amazon EC2 will shutdown automatically if idle for chosen time
- Added ability to disable Amazon EC2 integration
- Command line personal builds runner is able to read list of changed files from stdin
- New system wide notifications introduced, currently with single notification option: responsibility assigned, also notifications for responsibility changes/assignment are now work
- TeamCity startup procedure improved, now while server starts you can see progress of the server initialization
- It is possible to attach build configuration to a template from a different project (thus it is possible to create projects that will have templates only)
- Move operation is supported for templates
- It is possible to specify cleanup rules for templates, "Build History Clean-up" page reworked to better suite systems with a lot of build configurations
- Compilation errors are shown in the separate section on My changes page
- [other fixes](#)
