

# Roadmap for CLion 2016.3

- Performance:
  - ★ We feel this is a good time to put a major effort into performance improvements. If you experience any issues at all with CPU and memory usage or face any UI freezes, please let us know! Check [this page](#) for the list of dumps and snapshots that can be useful for us to investigate and localize the problem.
- Language support:
  - ★ Fixes to overload resolution (linked to this [ticket](#) mostly).
  - ~~Problems with friend and using aliases.~~
  - ★ Support for user-defined literals (C++11).
  - ★ Support for C++14 digit separator.
  - ★ If we still have resources left, we may devote some time to `_Generic` command (C11).
  - ★ There is also a list of regressions that we need to go through.
- CMake:
  - ~~Support for add\_custom\_target command~~ (if you face any problems with this command in CLion, please describe them [here](#)).
  - ★ Ability to specify the build/generation output directory.
  - ★ Ability to specify build types (Debug, Release, etc.).
  - ★ Reload performance improvements.
  - ~~Ability to select Ninja generator instead of Makefiles.~~
- Debugger:
  - ★ Remote GDB debug on Windows.
  - ~~Disassemble view.~~
