[Fixed issues in the tracker](#)

Feature

- [TW-51635](#) - Support proxy with authentication in VersionChecker

Usability Problem

- [TW-40767](#) - Provide better validation for artifact paths patterns in cleanup rules dialog
- [TW-51763](#) - Confusing error message when creating project from URL using GitHub integration and empty repository
- [TW-51571](#) - Provide more user friendly error messages on attempt to setup empty GitHub/Bitbucket repository via create from URL form

Bug

- [TW-51777](#) - After teamcity upgrade gradle mute not working
- [TW-37563](#) - Ignored test is displayed as failed on test statistics chart
- [TW-42297](#) - Agent push fails when JAVA is already installed on agent
- [TW-51905](#) - Update Tomcat version to 7.0.82 or later, to address CVE-2017-12615/12616/12617
- [TW-51854](#) - Statistics charts are editable in read-only projects
- [TW-51772](#) - UnsupportedOperationException in MavenSettingsManagerImpl
- [TW-50057](#) - sbt build fails if an agent is installed in a directory with spaces in a path
- [TW-51448](#) - SBT runner: the wrong listener is used when SBT project has no build.properties file (SBT version specified as -Dsbtc.version parameter)
- [TW-51713](#) - Incorrect behavior on edit notification rule.
- [TW-51849](#) - Duplicate id error after extId case change
- [TW-51874](#) - Duplicate uuid is not detected in when its case changed
- [TW-51647](#) - Error during loading project settings from VCS can erase critical errors in unrelated project
- [TW-51858](#) - Project copy doesn't remap settings root id
- [TW-51703](#) - Check artifact dependencies fails on disabled dependencies
- [TW-46111](#) - Agents Statistics: build popup on mouse over does not display sometimes
- [TW-51729](#) - Enforced execution timeout value is ignored
- [TW-51804](#) - RejectedExecutionException in DiskUsageTaskExecutor\$updateWorker.schedule (does not handle server shutdown properly)
- [TW-51564](#) - "Could not fix location of build artifacts directory" error on case-insensitive file system
- [TW-51765](#) - Authorization for a bitbucket repository does not work when repository url is inserted using bitbucket icon popup
- [TW-51771](#) - Wrong link can be inserted when clicking on a bitbucket repository link in a configured connection
- [TW-51796](#) - NuGet Publish: use upload directory within data directory
- [TW-51680](#) - Visual Studio Addin installation fails on Windows 10
- [TW-51645](#) - Duplicate build configuration name is not detected
- [TW-51801](#) - Impossible to add Snapshot dependency to the build configuration.
- [TW-51677](#) - Versioned settings in new project is not shown in health report
- [TW-51339](#) - VersionChecker does not use configured proxy
- [TW-51735](#) - NPE from HistoryChangesResult.getModIds
- [TW-51749](#) - Powershell runner doesn't report execution errors
- [TW-51131](#) - Main page expand works only the second time
- [TW-51733](#) - IllegalArgumentException on server startup: ParameterFactoryImpl.deserializeDBParameter must not be null
- [TW-51681](#) - Confusing versioned settings status when settings on TeamCity server are up-to-date
- [TW-51556](#) - Broken conf\catalina.properties in distributoin: strange JVM system properties
- [TW-51682](#) - Project with settings in Kotlin format erases versioned settings error in unrelated project
- [TW-51547](#) - Auto discovery can show build steps with unknown runner if some runners are disabled in the project
- [TW-51596](#) - Build with specified build number artifact dependency fails after 2017.1 upgrade

- [TW-51572](#) - Project admin does not see link to View parent project of the project where this user is admin
- [TW-51618](#) - Secure parameters defined in build configuration / template or VCS root are not decrypted properly in case of versioned settings and enabled tokens
- [TW-51531](#) - Race condition during updating cloud profile
- [TW-51355](#) - "Failed to instantiate `jetbrains.buildServer.server.rest.data.mutes.MuteFinder`" under Java 9
- [TW-51506](#) - Vmware plugin unable to read guestInfo properties on macOS.
- [TW-51416](#) - Improve incorrect CTest results parsing
- [TW-35043](#) - Excessive wrapping on chain view: build's status and triangle can be wrapped
- [TW-51452](#) - Perfmon artifacts are not published properly in case of S3 artifacts storage

Performance Problem

- [TW-51499](#) - Filter of projects / build configurations on notification rules page freezes browser
- [TW-51767](#) - BackgroundArtifactsUpdater can have large number of tasks during the cleanup
- [TW-51385](#) - TeamCity agent downloading artifacts is extraordinarily slow between New York and Dublin
- [TW-51598](#) - Many identical SQL queries during changes collection for a large build chain

Security Problem

- [TW-51625](#) - Upgrade Tomcat to version 7.0.81 to ensure CVE-2017-12615 is not actual
- [TW-51859](#) - It is possible to configure cross-hierarchy settings VCS root
