

Command Line Tools - Custom Tools Command Definitions

The license could not be verified: License Certificate has expired!

[Tweet](#)

This page contains a list of custom command line tools command definitions (in XML format) provided by third-party developers.

Custom command line tools can be added through the IDE Settings | Command Line Tool Support pane in PhpStorm. We can define commands, parameters and help information for our custom command line tool via special XML file. After saving the XML file containing the description for a specific custom tool, PhpStorm will recognize the command and provide us with autocompletion for our custom command line tool. Check a full [tutorial here](#).

| # | Tool | Name | Author | URL |
|---|--|---|-------------------|---|
| 1 | TYPO3 Flow | TYPO3 Flow command line tool | Torben Hansen | https://github.com/derhansen/typo3-flow-phpstorm-cl-xml |
