

# Eluru 6.5.4 (build 18046) Release Notes

## Usability Problem

- [TW-17891](#) - VS addin: No way to interrupt long Subversion command execution
- [TW-17479](#) - Build log opens tail view by default (behavior changed since 6.5.1)
- [TW-14720](#) - Custom backup options labels should not be gray
- [TW-14515](#) - Remove "Express" backup" from logs, use user-introduced terms
- [TW-14071](#) - Provide a link to creating backup on maintenance page (no automatic backup possible case)

## Bug

- [TW-18289](#) - BuildTypeNotFoundException exception in the server log
- [TW-18270](#) - Dep parameters are not added for artifact dependencies of snapshot dep
- [TW-18167](#) - After upgrade to 6.5 TeamCity can start collecting changes from the very old revision
- [TW-18162](#) - build.start.properties and build.finish.properties artifacts are too large
- [TW-18136](#) - Cannot switch agents to JRE 1.6
- [TW-18119](#) - Checkout on agent fails for CVS in case there are two VCS roots, one of which has checkout rules
- [TW-18079](#) - Incorrect value of attribute href in vcs-root element
- [TW-18075](#) - "Failed to publish artifacts. Server status: 500 (Internal Server Error)" in the build log on artifact file reading error
- [TW-18032](#) - FindBugs inspections count differs in build status, inspection results and findbugs tool output
- [TW-18026](#) - Git VCS root with build parameter in branch name used in a configuration template across projects shows VCS errors
- [TW-18021](#) - Builds can be delayed in the queue not starting (long checking for changes for the first chain build case)
- [TW-18017](#) - IDEA runner failed to find tests in nested packages to run
- [TW-18013](#) - Spelling mistake in AssemblyInfo patcher
- [TW-17992](#) - No yellow warning on administration pages when internal database is used
- [TW-17991](#) - TeamCity does not recognize JDK 1.7 Javac error messages
- [TW-17963](#) - java.lang.NullPointerException - JavacCompilerOutputProcessor
- [TW-17953](#) - Agent can connect to the server with no plugins loaded and be incompatible with all environment-dependent runners
- [TW-17937](#) - ClearCase plugin must use the date of the last change as current version
- [TW-17924](#) - Serverside teamcity git change fetcher fails with exception (Merge commit with submodules?)
- [TW-17897](#) - Unlimited recursion in jetbrains.buildServer.vcs.impl.VcsManagerImpl.getContentForVcsRoot
- [TW-17884](#) - My Changes tab opens with item selected from 4 months ago
- [TW-17863](#) - Code Inspection shows wrong line numbers for FindBugs
- [TW-17848](#) - Regular Git error: The repository at directory '<BasePath>\.BuildServer\system\caches\git\git-2775A571.git' cannot be opened or created, reason: Unknown repository format "null"; expected "0".
- [TW-17818](#) - Xml Report Processing Inherited from Template is duplicated at each server restart
- [TW-17775](#) - Builds with "snapshot dependency: Do not run new build if there is a suitable one" trigger new run in dependent build every time.
- [TW-17628](#) - Log exception in the log in debug mode only
- [TW-17518](#) - "Failed to extract the testId from problem id" messages in cleanup log
- [TW-17129](#) - Expired snapshot dependencies cause 'Problem with Maven Snapshot Dependencies' instead of starting a new build
- [TW-16560](#) - Incorrect agent perforce checkout for two VCS roots (specific files in Perforce client mapping case)
- [TW-15784](#) - Confusing error during server startup (antivirus case)
- [TW-15395](#) - Server does not start if no teamcity data directory created.
- [TW-14985](#) - NPE from jdbcConnection.prepareStatement on double server startup
- [TW-14718](#) - Backup settings form should show what does backup means on load
- [TW-14708](#) - Do not print stacktrace in server log on missing database driver (and other well known business-level errors)
- [TW-12761](#) - Agent priority not following true build speed
- [TW-12274](#) - Issue checking out CVS and Mercurial source within same build
- [TW-11743](#) - Display checking for changes status for queued first builds in the chain
- [TW-10761](#) - Cannot use label name in labeling rules: path not found: 404 Not Found
- [TW-10401](#) - Occasional TransportException: Remote does not have refs/heads/master available for fetch.

## Exception

- [TW-18055](#) - EA-29436 - NSME: BuildConfigurationDetailsPanel.getSelectedBuildInstance
- [TW-18029](#) - EA-29402 - assert: CompositeElement.findChildByType
- [TW-18024](#) - Unexpected Error on "Build Results" - "Tests" tab
- [TW-17983](#) - EA-29276 - assert: ClsFileImpl.getStubTree

- [TW-17712](#) - Error during input checking Caused by: Length cannot be less than zero. Parameter name: length
- [TW-15648](#) - Object reference not set to an instance of an object.
- [TW-15352](#) - Can not build with MSBuild

## Performance Problem

- [TW-18147](#) - TeamCity tries to build an incremental patch even when fromRevision==toRevision for a VCS root
- [TW-18053](#) - Listing a large changeset is extremely slow
- [TW-17843](#) - Non-responsive UI with 6.5.2
- [TW-10622](#) - P4 checking for changes is too slow

## Cosmetics

- [TW-18018](#) - Typo in message for "server is in cleanup mode"
- [TW-15457](#) - VSAddin error message on HTTPS connection failure should be improved
