

Support for Ligatures in Editor

Supported fonts

Latest versions of the following fonts using ligatures are known to work in IDEA 2016.1:

- [Hasklig](#)
- [Fira Code](#)
- [Patched version](#) of Monoid/Monoisome
- [Pragmata Pro](#)

Since version 2016.2 other fonts should also work fine.

Known issues (for IDEA versions before 2016.2)

- Performance degradation was reported when 'Fira Code' font was used with ligatures enabled.
- Wrong kerning for Monoid/Monoisome (especially notable on Retina screens for 'is', 'in', 'it' pairs)
- Font rasterization is different when ligatures are enabled on Mac OS

If you are aware of any other issues, please report them [here](#).
