# PhpStorm Webinars

All the latests PhpStorm Webinars can be found at the official website: https://www.jetbrains.com/community/webinars/

### What's New in PhpStorm 9
Webinar date: 22nd July 2015
Speaker: Mikhail Vink
˅ Webinar Description...

PhpStorm 9, released on July 8, 2015, refines your editing and debugging experience for a significant productivity boost, boasts advanced code understanding, and provides complete support for remote development.

During the webinar, Mikhail overviews new features and major improvements brought in this release:
PHP Language & Editing Experience: Includes postfix code completion for PHP, partial PHP 7 support, advanced code understanding, and other enhancements.

This webinar is geared towards developers of different proficiency. It also features live Q&A session. Learn more about this webinar.

### What's New in PhpStorm 10
Webinar date: 19th November 2015
Speaker: Garry Hockin
˅ Webinar Description...

PhpStorm 10 brings significant improvements in PHP language support, editing experience, debugging, code analysis, and many other powerful features. Let us guide you through all the major features and improvements.
Learn more about this webinar.

### Taking Advantage of PhpStorm IDE and Zend Server Integration
Webinar date: 20th October 2014
Speaker: Mikhail Vink
˅ Webinar Description...

Write code with pleasure and make sure that your project is safely deployed and easy to debug, with the new collaboration between JetBrains and Zend! During this webinar we explore the integration between Zend Server's Z-Ray and the PhpStorm IDE, from debugging and profiling your applications seamlessly to preparing deployment packages in the IDE to be deployed to Zend Server, and more.

This webinar is geared towards developers of different proficiency. It also features live Q&A session. Learn more about this webinar.

### What's New in PhpStorm 8
Webinar date: 7th October 2014
Speaker: Maarten Balliauw
˅ Webinar Description...

During the webinar, Maarten overviews new features and major improvements brought by PhpStorm 8 release.

PhpStorm 8, released on 16th September 2014, brings even more emerging technologies to help you enjoy web development, with deepest-ever code understanding and advanced support for remote environments.

- PHP Language Support: completely re-worked language injections into PHP literals; PHP 5.6 full support; source & test directories for PHP
- Frameworks: Blade template engine support; WordPress support; Drupal 8 support
- Behat support
- Remote PHP interpreters support
- Web technologies: AngularJS; Grunt; spy-js
- Platform: Multiple carets and selections; working with a single file without creating a project; bundled Scratch plugin
- and more…

This webinar is geared towards developers of different proficiency, questions & answers session is also included in this video. Learn more about this webinar.

### PHP Annotations: They exist!
Webinar date: 11th June 2014
Speaker: Rafael Dohms
˅ Webinar Description...

This session shows you who is doing what with annotations, and will give you some ideas on how to use the existing tools in your own projects to keep life simple. Developers, architects and anyone responsible for the technical direction of an application should view this session.

Annotations are more than PHPDoc comments, they're a fully-featured way of

### Spec BDD with PhpStorm and PhpSpec
Webinar date: 27th May 2014
Speaker: Kacper Gunia
˅ Webinar Description...

In this webinar we dive into BDD workflow in PhpStorm IDE and show how to drive design of your code with PhpSpec. With focus on refactoring, source and file navigation, live templates and autocompletions you can learn how to shorten your development feedback loop and write well specified applications faster.

This webinar is geared towards developers of different proficiency and features Q&A session in the end. Learn more about this webinar.

including additional information alongside your code. We might have rejected an RFC to add support into the PHP core, but the community has embraced this tool anyway!

This webinar is geared towards developers of different proficiency, questions & answers session is also included in this video. Learn more about this webinar.

Deployment with PhpStorm
Webinar date: 12th March 2014
Speaker: Maarten Balliauw
⌄ Webinar Description...

How easy is it to connect to remote hosts from PhpStorm and copy over files from our project to the server? And can I do that when committing code to VCS?

In this webinar, we explore PhpStorm's deployment options and answer these questions, and more. We see how to do the basics as well as how we can map different folders in our project to different folders on the server, synchronize application code and more.

Is it a good idea to deploy to production right from within PhpStorm? Are there other options that are better suited?

We explore the deployment cycle of our applications, and make sure we can develop smoothly on a development server or a Vagrant box. We also see how to use PhpStorm's built-in deployment tools, Phing, and a sprinkle of continuous integration.

This webinar is geared towards developers of different proficiency and features Q&A session in the end. Learn more about this webinar.

What's New in PhpStorm 7: Beyond the Language
Webinar date: 14th November 2013
Speaker: Maarten Balliauw
⌄ Webinar Description...

In this webinar recording, Maarten will gives an overview of the new features and major improvements in PhpStorm 7, such as:

- PHP language support: PHP 5.5, improved PHP syntax coloring, type inference and PHPDoc improvements, new refactorings.
- Built-in tools: Vagrant, built-in SSH console & remote tools, local terminal, support for more command line tools, Google App Engine for PHP, etc.
- Debugging and testing: Debugger configuration validation, debugging with Smart Step Into, PHPUnit on Server improvements.
- Frameworks and plugins: Built-in support for Drupal; 3rd-party plugins for Symfony and other frameworks.
- Brand new web toolkit: JavaScript templates, re-worked JavaScript debugging and Live edit, etc.

Refactoring Legacy Code with PhpStorm
Webinar date: 28th January 2014
Speaker: Mathias Verraes
⌄ Webinar Description...

In this webinar, Mathias Verraes starts from a piece of code that is messy and uncovered by tests. Using PhpStorm's automated refactoring tools, the code is gradually cleaned up, moved around, and brought under test. What emerges is a cleaner, more expressive domain model. Learn more about this webinar.

Version Control with PhpStorm and other IntelliJ IDEA-based IDEs
Webinar date: 2nd October 2013
Speaker: Maarten Balliauw
⌄ Webinar Description...

Working with a Version Control System or VCS should make your life easier, so they say.
In this webinar, we have seen if that saying holds true.

We have covered the basics about version control:

- What is it and why would we need it?
- Which one should we choose?
- How can my IDE help me with it?

We have covered unified VCS, which makes working with Git, Mercurial, Subversion and many other VCS systems much simpler. We've also learned about local history, change lists, GitHub integration and more.

This webinar is geared towards developers of different proficiency, but is most useful for those who only begin using VCS. Learn more about this webinar.

This webinar was recorded November 14th 2013 and is geared towards developers of different proficiency. Learn more about this webinar.

**Debugging PHP with PhpStorm**
Webinar date: 18th July 2013
Speaker: Maarten Balliauw
⌄ Webinar Description...

This is your ultimate guide to debugging any PHP applications with PhpStorm. In this webinar, we'll have a look at the debugger that is integrated in PhpStorm and explore its capabilities.

The webinar covers all the debugging-related activities you may want to perform, such as:

- Simple debugging with run/debug configurations
- Debugging unit tests
- Zero-configuration web applications debugging with Xdebug
- Simultaneous debugging sessions
- Multi-user debugging via DBGp proxy
- Remote debugging
- And more...

You will also see how you can profile PHP applications with PhpStorm IDE.

This webinar is geared towards developers of different proficiency. Learn more about this webinar.

**Quality Assurance for PHP Projects Using PhpStorm**
Webinar date: 25th April 2013
Speaker: Michelangelo van Dam
⌄ Webinar Description...

Michelangelo van Dam told us about Quality Assurance for PHP in general and show how different QA-related actions can be performed using PhpStorm IDE.

Michelangelo's slide-deck is available at SlideShare and the source code can be found at GitHub.

The webinar covered different topics including:

- Revision control
- Syntax checking
- Code documentation
- Unit Testing with PHPUnit
- Measuring code health with a variety of tools
- Profiling and debugging with Xdebug
- Automation with Phing
- Team work and more.

Learn more about this webinar.

**PhpStorm Best Practices – The Perfect Workflow for PHP Developers**
Webinar date: 29th May 2013
Speaker: Maarten Balliauw
⌄ Webinar Description...

In this webinar, we look at the most important everyday actions in PhpStorm IDE. Learn how to navigate between files, classes or other elements in our project, and see how we can use code autocompletion, PHPDoc, intentions and live templates to make our life as developers easier. Learn more about this webinar.

**PhpStorm 6 - More Tools to Develop Smarter, Not Harder**
Webinar date: 26th March 2013
Speaker: Maarten Balliauw
⌄ Webinar Description...

Maarten went through the most important features of the latest PhpStorm 6 release including new refactorings, Composer dependency manager for PHP support, Smarter namespace handling, Code (re)arranger, Fully customizable templates and also provided an overview of the brand new web toolkit featured in this release such as Full-featured debugging of TypeScript, Dart or CoffeeScript with source maps, Refined handling of JS libraries, REST Client, Re-worked HTML structure view, Improved HTML and CSS coding including Emmet, New database schema editor and change tracking tools and more! Learn more about this webinar.
