

# StandardSpanClasses

This module contains a standard set of span classes. Use them to markup your rules, so they can be highlighted in IDE.

```
syntax module StandardSpanClasses
{
  using Identifiers;

  span class Comment;
  span class Char;
  span class String;
  span class Number;
  span class Keyword    = ['a'..'z', '_'] ['a'..'z', '_']+;
  span class Operator    = ['+', '-', '/', '*', '^', '!', '?', ':',
                          '<', '=', '>', '|', '&', '~', '%'] +;
  span class OpenBrace   = "(" | "{" | "[";
  span class CloseBrace = ")" | "}" | "]" ;
}
```
