

Adding productivity guide tips

When adding a new productivity guide tip, please follow the following guidelines:

1. . Create an html file describing the tip and place it in `/workbench/resources_en/source/tips`. Please follow the styles used by other tips.
2. . List your new html file in `/workbench/resources_en/source/tips/tips.xml` to make it part of the Tip of the day dialog
3. . Add a call to `FeatureUsageTracker.getInstance().triggerFeatureUsed("my.key");` into the appropriate action to indicate use of the feature to the productivity guide, where `my.key` is an identifier for the productivity tip that you create or re-use.
4. . Add a display name to the key in `/workbench/resources_en/source/messages/FeatureStatisticsBundle.properties`
5. . Register a productivity guide entry in `/workbench/resources/source/ProductivityFeaturesRegistry.xml` mapping the id to the html page
