TeamCity 2017.2.1 (build 50732) Release Notes
TeamCity 2017.2.2 (build 50909) Release Notes

Feature

- TW-52422 - Support Azure Container Registry in Docker plugin
- TW-53691 - Passing Katalon Studio Command Line test being marked as ignored in JUnit report within TeamCity

Usability Problem

- TW-53263 - Confusing presentation of agent enable / disable comment and warning icon
- TW-53630 - Layout hides "Add" button
- TW-53493 - Text selection over branch label is not visible
- TW-53536 - Extra new lines are copied when copying Agent name with the pool name on Agents tab.

Bug

- TW-53850 - My Changes page is scrolled to the top by itself
- TW-49325 - SVN agent-side checkout fails with error "E200030 There are unfinished transactions detected"
- TW-51199 - Overlapping text on build overview page when build has build problems
- TW-51847 - psexec tool needs to be reinstalled after each server restart
- TW-53415 - VCS Roots with svn:// does not keep commit message when TeamCity does commit operation
- TW-53857 - Docker wrapper: docker pull stderr is reported as error message which can fail a build
- TW-53481 - TeamCity may not restore root permissions for a build with docker wrapper when the build is cancelled in the middle
- TW-53513 - Log rejected patch requests in teamcity-server.log
- TW-53539 - Code inspections section is not shown for builds which report 0 inspections
- TW-53562 - "Invalid RSA public key" on opening step settings when Artifactory plugin is installed
- TW-53587 - RunningBuildsManagerImpl.scheduleUpdateBuildsTask is not protected from RejectedExecutionException
- TW-53613 - Build Config VCS: Custom Checkout directory setting lost
- TW-53704 - Build log and artifacts of the build can be lost in two nodes setup if running builds node becomes unavailable
- TW-53758 - No series when editing statistics charts first time
- TW-53772 - Docker login build feature doesn't work for wrappers (docker EE client)
- TW-53818 - Builds with artifact dependency fail to start when old Torrent plugin is installed.
- TW-53881 - Swabra does not kill locking processes when Files cleanup option is <Do not clean up>
- TW-53888 - Random error when getting Kotlin settings from VCS
- TW-44515 - Build number can be lost if moving configuration via VCS
- TW-53037 - Review build file default for Gradle runner (was: Kotlin DSL incorrectly defaults Gradle build file to build.gradle)
- TW-53068 - Teamcity agent not using proxy settings when trying to resolve/publish artifacts
- TW-53097 - Git fetch issue
- TW-53127 - Multiple "DiskUsage: Cannot write build mapping ... NoSuchFileException" messages in the server log
- TW-53162 - Improperly nested "Loading current repository state for VCS root" verbose messages in the build log
- TW-53350 - Project disappear from all pools when UUID changes
- TW-53421 - Using special chars in docker password fails docker login feature
- TW-53439 - Upgrade Waffle to version which uses JNA >= 4.0
- TW-53504 - Broken (enlarged) font size in Chrome on Android on Overview
- TW-53528 - VCS root problem details are not shown when branch is selected
- TW-53531 - Build cancel with Docker Wrapper does not stop container
- TW-53537 - Links to specific failed tests do not expand the test anymore
- TW-53541 - Auto Update breaks Server Context
- TW-53548 - "Attempt to read TeamCity internal property "teamcity.logs.rotateOnDayMinimalFileSize" before initialization!" in agents wrapper.log
- TW-53564 - Password fields maxlength
- TW-53577 - While creating administrator account progress icon displayed outside button
- TW-53595 - Suppress MySQL health report
- TW-53666 - Changes page isn't refreshed when some sections are open on it
- TW-53672 - Changes view: after clicking on collapse section icon, the icon is changed but the section remains expanded
- TW-53678 - The layout is broken in Copy template dialog.
- TW-53688 - Health report about hanging queued builds should report dependent queued builds too if they depend on builds without agents
- TW-53696 - Old build numbers file prevent build configuration move
- TW-53744 - Wrong DSL UI patch if DSL has parameters with default values

- TW-53746 - Wrong DSL UI patch for compound parameters
- TW-53748 - Automatically generated branch name exceeds 1000 characters
- TW-53775 - Too narrow promote build dialog
- TW-53809 - Build problem text is displayed improperly
- TW-53833 - A build step duplicates on detach from template if it was defined (with the same id) both in that template and in a default template
- TW-53836 - ssh variant 'simple' does not support setting port
- TW-53861 - Two or more servers may run simultaneously after restart
- TW-53862 - Java for runnning server/agent is not searched in '/usr/java'
- TW-53892 - PersistFailedException when resuming/pausing build configuration
- TW-53944 - [File Content Replacer] Improve build logging in case of I/O errors
- TW-53953 - Vmware plugin should terminate VM if reconfigureVM_Task fails
- TW-53957 - Vmware plugin processes reconfigure events too slow
- TW-54010 - cleanup hanging "Failed to perform cleanup with extension" "jetbrains.buildServer.serverSide.statistics.diskusage.DiskUsageSListener$PinnedBuildsCollector"

Exception

- TW-51505 - Warn in logs about failed DSL compilation during TeamCity shutdown
- TW-53928 - java.lang.IllegalArgumentException: Argument for @NotNull parameter 'range'

Performance Problem

- TW-53752 - Memory leak in KeepNDaysPolicy because of static IdentifiersGenerator instance
- TW-51937 - SBuildType.getFileContent() can cause a lot of unnecessary getCurrentState calls
- TW-53832 - ObsoleteFilesCleaner can process directories for hours and occupy multiple threads
- TW-53143 - Slow trigger processing (minutes) for a build configuration with many branches
- TW-53695 - Memory leak in UserInvestigationsCounterProvider
- TW-53729 - A lot of memory can be occupied by agent type policy if agent type belongs to a pool with all of the projects and projects are constantly created/removed on the server
- TW-53743 - Freeze of the queued build settings can consume a lot of CPU if there are many VCS roots in projects model

Security Problem

- TW-53978 - Possible JavaScript injection on adding VCS root
- TW-53984 - JavaScript injection related to vmWare plugin settings
- TW-53943 - Cross-Site Scripting (XSS) issue on editing build configuration

Cosmetics

- TW-53575 - Missing bottom border for progress on build results page (Edge)
- TW-53620 - Star indicating that the field is mandatory can detach from the label
- TW-53700 - Too large spacing between OS icon and OS name on build agent's page
- TW-53753 - Unnecessary wrapping of the test name in build summary popup
- TW-53806 - Connection icon is displayed on a new line in add/edit issue tracker dialog
- TW-53594 - Extra dot in "TeamCity is updating" message
