

API changes in IntelliJ IDEA 14 (Cassiopeia)

 Problems upgrading your plugin to 14? Please ask in [forum](#).

- There can now be several `VirtualFile` instances corresponding to the same file, so one should use `equals` instead of `==` and avoid identity and weak maps/sets.
- `CacheUpdater` is deprecated, `DumbModeTask` should be used instead
- `InspectionProfileEntry` implements `com.intellij.codeInspection.BatchSuppressableTool`; in order to implement suppressions for a new language one needs to implement `com.intellij.codeInspection.InspectionSuppressor`
- ASM 5 is used by default; prefix was changed to `org.jetbrains.org.objectweb`.
- `TypedHandlerDelegate` implementations are invoked now automatically for each caret
