SBT Runner Plugin

> ⊘ The plugin is bundled since TeamCity 9.1. Check the corresponding section in the documentation.

General Info

Author	Ekaterina Shliakhovetskaja
License	Apache 2.0
Type	free, open-source
Downloads:	SBT runner for TeamCity 9.0.x
	SBT runner for TeamCity 8.1.x
	SBT runner for TeamCity 8.0

Plugin Description

Adds the ability to run SBT builds in TeamCity. Supported SBT version 0.13.x.

The plugin supports native SBT log level provided via project config files or via commands (e.g. --error) in command lines. All errors which occurred during the build execution will be shown in an easy-to-read form.

Important note: If you were using the first snapshot version of SBT runner with the 'Custom' SBT installation mode, please remove the following lines from your project builds file and/or your SBT global config settings:

```
resolvers += Resolver.url("sbt-plugin-snapshots", new
URL("http://repo.scala-sbt.org/scalasbt/sbt-plugin-snapshots/"))(Resolver.ivyStylePatterns)

addSbtPlugin("org.jetbrains" % "sbt-teamcity-logger" % "0.1.0-SNAPSHOT")
```

Features:

- runs SBT builds
- displays build results in handy way
- displays test results in handy way

Update to fresh build

You may want to update to the latest build of the SBT runner plugin. The current latest plugin branch is compatible with TeamCity 8.1.x. To apply the patch, please do the following:

1. Download the latest build from here.
2. Stop the server,
3. Locate `<server>/webapps/ROOT/WEB-INF/plugins/tc-sbt-runner.zip`
4. Backup the original file
5. Replace it with one downloaded from the latest build artifacts
6. Start the server again
