

# Grails Application

## Grails Application

You can use the standard grails utilities like

- Grails Application
- Grails Domain class
- Grails Controller
- Grails Service
- Grails Job
- Grails Script
- Grails TagLib

To use it you have to

1. Add new Grails module in your project. [File->New Module->Grails Module]
2. Use facet to configurate Groovy and Grails libraries
3. After module creating you can use these utilities. You'll found it in the module menu
