

# IDEA 11.1 EAP

## What is Early Access Program

We at JetBrains believe that making tools for developers should greatly involve listening to developers. Our Early Access Program lets development community closely participate in discussions devoted to IntelliJ IDEA and influence development planning, from early stages onwards. Early Access Program allows you to try pre-release versions of our software to evaluate features that will be added to the next release.

### Be Careful

It is important to distinguish EAP from traditional pre-release software. Please note that the quality of EAP versions may at times be way below even usual beta standards.

## What is IntelliJ IDEA 11.1?

IntelliJ IDEA 11.1 is a minor feature update for IntelliJ IDEA 11, released on March 28, 2012. IntelliJ IDEA 11.1 is a free upgrade for users of IntelliJ IDEA 11.

IntelliJ IDEA 11.1.5 has been released on December 18th, 2012. You can download it from <http://www.jetbrains.com/idea/download/>

If a feature in the following list doesn't seem to be clear enough, don't worry 😊 We're going to publish blog posts describing each of the new features in more detail.

- Continued work on UI changes (Project View, run/debug toolwindows UI redesigned)
- Subversion 1.7 support (work in progress)
- Changes View update optimizations, 'move' command support and other improvements for Perforce integration
- New Coverage view
- New tree-based File Structure Popup
- Improved popup for controlling Git branches (checkout, compare, delete, multi-root support)
- Git commit & Git status performance optimization.
- Highlighting of unused public members in Groovy code
- Extract Closure refactoring for Groovy
- New Flex project structure (work in progress)
- Spring support improvements
- Hibernate 4 support (work in progress)
- Gradle project synchronization support
- Android lint tool integration
- Magic Constant inspection and code completion
- Possibility to run JUnit or TestNG tests from abstract classes, as well as for any selection of classes or methods

- Groovy Shell (Tools menu) to quickly execute code snippets in project classpath
- Chained code completion for Java and Groovy
- ECMAScript "Harmony" syntax support in the JavaScript plugin
- A distinctive highlighting for reassigned Groovy variables and parameters
- Custom regions for code folding
