[TeamCity 2019.1 Release Notes](#)

Usability Problem

- [TW-60888](#) — Do not scroll sidebar after selecting item, which belongs to favourites
- [TW-61182](#) — Trends and builds list show different last build

Bug

- [TW-18524](#) — Extremely long service message does not catch failed test
- [TW-35315](#) — Lock wait timeout in MySQL while updating last login timestamp
- [TW-55495](#) — Docker Compose: run chown to restore file permissions on Linux after the build
- [TW-58635](#) — After upgrading, TeamCity is not finding changes for branches and pull requests built before upgrading to 2018.2
- [TW-59024](#) — "The build was triggered in the branch which does not correspond to any branch monitored by the build VCS roots" can be displayed for some pull requests
- [TW-59031](#) — Build can be started on the default branch instead of a PR head when re-running build for some pull requests
- [TW-59182](#) — MySQL LockWaitTimeoutException from VcsModificationsStorageImpl.persistModification
- [TW-59524](#) — Many redundant builds on old branches can be triggered (schedule trigger with only build on pending changes, yet there are no changes in the builds)
- [TW-59603](#) — Pull-request plugin doesn't work for PR when the build feature was added after the PR was created
- [TW-59979](#) — Configured custom server context is ignored when NuGet Feed is created
- [TW-60532](#) — Provide a way to disable Experimental UI for all users
- [TW-60987](#) — Incorrect link in build log
- [TW-61017](#) — Show GitLab v3 related stacktrace only in DEBUG mode
- [TW-61067](#) — Build in GitLab merge-requests fails to start
- [TW-61143](#) — YouTrack integration can produce 401/Unauthorized errors for long permanent tokens.
- [TW-61201](#) — Cloud profile falls into an error state when looking for a task that doesn't exist anymore. ECS Plugin
- [TW-61227](#) — Requirement for teamcity.tool.* parameter makes agents incompatible until the tool is downloaded
- [TW-61231](#) — Change's related builds finding can be broken: shows unrelated builds, does not show the proper ones
- [TW-61269](#) — Pull request build feature sometimes fails to provide branch specs for old pull requests with new commits
- [TW-61337](#) — Docker Wrapper scripts have to escape '|' character (at least in Project Name)
- [TW-61372](#) — Subsequent builds are cancelled with comment "Agent runs unknown build we're not aware of" (pending commands related to execution timeout are in the messages queue)
- [TW-61395](#) — List of builds for all build configuration will be empty after switching from favorites builds
- [TW-61413](#) — dotnet test failed to run test after update to 2019.1.2: .NET SDK was not found
- [TW-61418](#) — Builds showing as hanging server-side but agent has finished
- [TW-61437](#) — Collapsed parent of a selected favourite item doesn't get selected
- [TW-61442](#) — Incorrect failed NUnit tests count (tests print to standard output and the output doesn't end with a new line)
- [TW-61448](#) — TeamCity reversed the order of Perforce client name generation
- [TW-61451](#) — "Old Java version" health item refers to 1 agent when there are more than 1
- [TW-61455](#) — Server may not start if catalina.out file becomes large
- [TW-61468](#) — Assertion error in ConfigChangesCommitterImpl.onProjectRemove
- [TW-61481](#) — "Build is running" indicator is frozen on tiles in Experimental UI
- [TW-61494](#) — "Couldn't initialize a SAX driver to create an XMLReader" exception when TeamCity tries to clean up artifacts in S3 with temp credentials
- [TW-61495](#) — View DSL doesn't work for build step when UI editing is disabled
- [TW-61506](#) — Verify email fails with log message "Attempt to use email sender before server is initialized."
- [TW-61563](#) — Build list always is filtered by a specific branch name if branch in classic UI was chosen
- [TW-61605](#) — View DSL action changes settings on disk (stores inherited build steps as overridden) when step editing is disabled
- [TW-61638](#) — File Content Replacer doesn't allow multiple lines in the UI, and "\n" doesn't introduce a new line, but it works if using parameters or versioned settings
- [TW-61650](#) — PullRequestBranchFullInfoExtension adds blank 'page fragment' to every build overview page
- [TW-61704](#) — Unexpected error while access token creation

Performance Problem

- [TW-61432](#) — Excessive memory usage inside XML RPC request processor

- [TW-61467](#)— Method Modification `DAGInt.getNodesWithoutChildren` can consume a lot of memory
- [TW-61599](#)— Lots of threads blocked on handling `'/app/agents/protocols'` after restart
- [TW-61603](#)— REST: Slow change finding by version
- [TW-61623](#)— Slow health report `SwabraCleanCheckoutWatcherImpl.getRecentCleanCheckoutCauses` because of inefficient storage of health report related data
- [TW-61627](#)— Slow calculation of health status item visibility because of many SQL queries on a server where many health items are detected

Task

- [TW-61434](#) — Get rid of `ZeroClipboard.swf`
- [TW-61764](#) — Update bundled ReSharper CLT to 2019.2.1

Cosmetics

- [TW-61527](#) — GitLab Connection button on create project/VCS root form has a duplicated label

Security Problem

3 security problems have been fixed.
