

Release Notes for Agra Minor, build 4193

closed Jira issues

New features

- Possibility to specify pre-script and post-script for Ipr runner. Allows to use Ipr runner with TestNG tests
- Possibility to specify pre-script for Inspections runner and for Duplicates finder. Allows to fetch necessary libraries before the build if they are not presented in version control system.
- Possibility to specify artifact path for Ipr runner
- Configurable server URL used in notifications (to allow https)
- Implement support of Load Rules for ClearCase View in the ClearCase VCS support plugin
- Support for ClearCase Base
- Display implicit agent requirements, derived from pattern substitutions
- Possibility to get configurations from network drive instead of VCS (build working directory for ipr/inspections/duplicates runners)
- Maven runner refactoring and fixes
- More convenient way of viewing enable & disable comments on agents page
