

# Eluru 6.0 RC2 (build 15700) Release Notes

Build contains mostly [bugfixes](#) and several improvements.

The most noticeable improvements are:

- schedule build trigger has got an ability to apply VCS trigger rules on pending changes
- IntelliJ IDEA project runner now supports pre- and post- steps for building IntelliJ IDEA artifacts
- diagnostics page now allows to load chosen log4j configuration file
- Tomcat 7 which is still in beta is now supported

Note: we no longer provide EAP license keys for 6.0 builds, the last build with EAP license key was RC1.
