

TeamCity 9.0.1 (build 32116) Release Notes

See also [TeamCity 9.0 Release Notes](#)

Usability Problem

- [TW-4892](#) - Custom chart should not have series chooser if there is only single value sequence available
- [TW-35772](#) - Failed to collect changes, error: Perforce 'changes' returns empty string
- [TW-39148](#) - Not enough information in "Meta-runner with specified name already exists" message
- [TW-39149](#) - Drop meta-runners unique server-wide name requirement
- [TW-39307](#) - "Reboot Agent Machine" reboots entire server

Bug

- [TW-15279](#) - Overview page can self-reload several times while loading
- [TW-17667](#) - MSTest marked with Ignore attribute is not reported by TeamCity
- [TW-19768](#) - Wrong order of build steps in template-based configuration of a copied project
- [TW-22443](#) - Wrong sorting of tools sections on user profile
- [TW-24093](#) - Perforce in TeamCity incorrectly treats /Path*/... pattern
- [TW-28938](#) - Make sure TeamCity plugin for IDEA supports AndroidStudio
- [TW-30012](#) - Mercurial. Builds fail to start when the same URI is used for different repositories.
- [TW-35368](#) - Symbol Server responses with 500 (internal error) instead of 401 (unauthorized) if guest user is enabled but has no permissions to access symbols
- [TW-36573](#) - Build can be run on outdated agent after server upgrade
- [TW-36764](#) - TeamCity Symbol Server plugin "Symbol Files Indexer" build feature returns "Directory is not found" file path error
- [TW-36908](#) - Overview page is frozen for a minute on retina display
- [TW-38849](#) - Add filtering by branch to queued build popup shown on change details and dependencies
- [TW-38922](#) - Incorrect build log tree view expanding (missing or extra nodes)
- [TW-38984](#) - Occasional "Exception occurred while scanning disk usage for build ... : java.lang.NullPointerException" on the server
- [TW-39051](#) - Versioned settings should be able to create branch in git
- [TW-39097](#) - Inconsistent passed/muted counters
- [TW-39153](#) - IDEA log: Notification group TeamCity.TestInvestigationUpdated is already registered
- [TW-39158](#) - Build stuck in "Cannot stop" state
- [TW-39180](#) - Project settings look like committed into VCS, while they are not (settings VCS root had errors initially)
- [TW-39184](#) - Child project settings might be not committed into VCS on VCS root change
- [TW-39187](#) - Change without comment can be committed on editing project's settings
- [TW-39226](#) - Do not log stacktrace into server log by default on versioned settings errors
- [TW-39243](#) - Hierarchy view of imported project isn't correct
- [TW-39259](#) - Wrong date (timezone?) in update.xml
- [TW-39265](#) - TeamCity Agent unable to detect VSTest.Console Tests after TeamCity 9.0 upgrade
- [TW-39273](#) - Broken layout on change log page (caused by PropertyNotFoundException: Property 'visibleBuildsCount' not found on type jetbrains.buildServer.util.Pager on the server)
- [TW-39275](#) - Different runners can fail after upgrade to 9.0: VerifyError: (class: org/jdom/Document, method: setDocType signature: (Lorg/jdom/DocType;)Lorg/jdom/Document;)Incompatible argument to function
- [TW-39279](#) - Multiplied "Versioned settings are globally disabled on the server" message in several server health items
- [TW-39284](#) - Build Configuration specific value type keys are not loaded for existing Project chart
- [TW-39300](#) - Do not dump stacktrace into log on "Cannot start perforce by path" perforce configuration error
- [TW-39309](#) - Unable to set authorize comment (setNString throws java.lang.AbstractMethodError)
- [TW-39313](#) - "NoClassDefFoundError: org/apache/tools/ant/taskdefs/Javac" error on running test with "Ipr (obsolete runner)"
- [TW-39314](#) - Lots of unexpected exceptions "SQLIntegrityConstraintViolationException/HsqlException: SQL error when doing: DML query SQL query: insert into indexed_build (provider_id, build_id) values(?, ?)"
- [TW-39316](#) - TeamCity 9.0 RTM LDAP Memory Leak + Crash
- [TW-39317](#) - Add XZ Utils to 3rd party licenses
- [TW-39321](#) - Versioned settings should be able to create branch in mercurial
- [TW-39322](#) - JavaScript error "Uncaught #<Object>" on marking a test as fixed
- [TW-39332](#) - Project Import - VCS username settings should be merged on project import
- [TW-39335](#) - No data shown on statistics chart for "All branches" and "Default branch"
- [TW-39336](#) - Custom project level charts are not visible to project viewer
- [TW-39342](#) - Finish build trigger can trigger chain with not the most recent available builds
- [TW-39359](#) - Fields block_type and state in user_blocks table should be remapped during projects import
- [TW-39362](#) - Notification rules are not imported for the merged user groups
- [TW-39365](#) - Some values in user_property table are not remapped during projects import
- [TW-39370](#) - Test ignored messages are not shown on the build overview page
- [TW-39378](#) - Wrong pending changes when versioned settings VCS root is attached to build configuration
- [TW-39392](#) - Documentation suggests to copy database.<database_type>.properties.dist file and modify it

- [TW-39394](#) - Resetting search caches does not pick up build log contents for search
- [TW-39407](#) - Enabling globally disabled versioned settings doesn't work when internal.properites file is not found
- [TW-39423](#) - Aliases should not prevent projects import
- [TW-39429](#) - Changes page: it shows fails from personal builds of my colleagues in my changes
- [TW-39433](#) - Fix the mssql.properties.dist file
- [TW-39437](#) - Late-bound parameters no longer work in TeamCity 9 (exception in Groovy plugin)
- [TW-39442](#) - Versioned Settings: meta-runners are not saved into VCS
- [TW-39449](#) - Project settings in version control override configs on server while shouldn't
- [TW-39452](#) - Idle timeout is calculated incorrectly. Agents are immediately shut down
- [TW-39467](#) - "Cannot read property 'innerHTML' of null" JavaScript error on mouse over "Hide" action for disk space server health item
- [TW-39473](#) - No error in the server log on some server startup error
- [TW-39474](#) - Confusing and unclear "The current JDBC driver version (5.0) is not supported. Download a newer one." message

Exception

- [TW-39318](#) - SQL Error on saving tests with long status: SQL query: update stats ... SQL exception: data exception: string data, right truncation
- [TW-39468](#) - Exception in teamcity-server.log after upgrade to TeamCity 9.0.

Performance Problem

- [TW-38567](#) - Should clean perform workspaces in background, not during the build
- [TW-39276](#) - Slow checking for changes due to excessive synchronization in VcsModificationStorage (long changes persisting time)
- [TW-39308](#) - Opening build log tab can take tens of minutes when server is loaded (high interlocking of MessagesPrinter.getMessageLine)
- [TW-39430](#) - Web UI can be blocked by build log initialization code

Security Problem

- [TW-39204](#) - Possibility to inject malicious page content by returning fake TeamCity server update check response

Cosmetics

- [TW-39141](#) - Overtime icon shifted to next row
- [TW-39258](#) - Agent name is wrapped on build overview page
- [TW-39282](#) - Subitems counts can be wrapped for Build Configuration Settings sections in IExplorer.
- [TW-39319](#) - Inaccurate left alignment on build results page
- [TW-39448](#) - Don't log "Instances in 'Running' status" messages
