## TeamCity 1.1.1

---

### Build 1712 -> Build 1727 (RC1)

- Bugfixes

### Build 1705 -> Build 1712

- Better messages when invalid license is entered
- IE 7.0 / FF 2.0 are supported
- Bugfixes

### Build 1681 -> Build 1705

- NEW! [TW-70](#) Click on a link in web interface to open it in IDEA (6.0.2 EAP is required for this)
- JDK 1.4 build can be run again
- Several fixes in Remote Run functionality

- Line level coverage for classes with UI designer instrumentation
- SVN with SSL certificate fixes
- Show file revisions for Perforce and CVS

## Build 1654 (1.0) -> Build 1681

- Initial TestNG support
  - Restore build queue after server restart
  - bugfixes
- 

## TeamCity 1.0

---

### Build 1631 (RC2) -> 1641 (RC3)

- Bugfixes

### Build 1615 (RC1) -> 1631 (RC2)

- Default configurations are not shipped anymore
- Better start/stop scripts for Linux/Mac
- Bugfixes

### Build 1611 -> 1615 (RC1)

- Windows installer
- Significant performance improvements
- [TW-816](#) Incorrect cvs modules processing
- [TW-769](#) Server-side commit commits changes I didn't want to commit
- [TW-416](#) Cannot stop build

### Build 1574 -> 1611

#### Features

- [TW-462](#) Content of an Artifacts folder rendered as a 'web folder'
- [TW-327](#) VCS Changes - add "since prev successful"
- [TW-309](#) Includable html fragment for build status
- [TW-304](#) "I've fixed it" feature (instead of "Give up responsibility"?)
- [TW-507](#) My Changes should show personal commits
- Some more

#### Bugs

A lot. Please see [Change Log](#) for details.

### Build 1529 -> 1574

#### Features

- [TW-448](#) Automatically place failed build in build queue
- [TW-670](#) Option to mark build failed if there is at least one failed test
- [TW-248](#) Allow e-mail configuration and jabber configuration from web page
- [TW-579](#) Avoid starting build immediately after VCS changes are detected (allow to set quiet period)
- [TW-203](#) Build execution timeout
- [TW-632](#) Schedule-based build trigger: Add option to skip build without any changes
- [TW-666](#) "Jump to" combobox on the History page

- [TW-699](#) Location of .BuildServer directory should be easily overridden
- [TW-730](#) Need to be able to use different from-address - not build-server@intellij.net
- [TW-707](#) Support NUnit tests for MSBuild (solution 2005) runner
- [TW-667](#) Support VCS ignore list
- [TW-709](#) Fixed URL for latest build of a selected build configuration

## Bugs

- [TW-629](#) "cvs server: invalid option - S" when trying to do a cvs checkout
- [TW-534](#) CVS Settings - Test Connection reports "Connection Failed" when there are innocent warnings
- [TW-740](#) SVN checkout should honor subversion config file or allow configuration
- [TW-721](#) Updated sources results in Jar and Zip files returning "invalid CEN header"
- "Success" is shown instead of number of passed tests
- more fixes

## Build 1492 (Beta) -> 1529

### Features

- View inspection results on web
- [TW-530](#) Non-admin users should have ability to view the build config
- [TW-519](#) Build Agent Requirements page should list the most popular types of properties, like OS, JDK, .NET Framework, etc.
- [TW-485](#) Show all error messages on Build Results page
- [TW-417](#) When adding a comment to "take responsibility" action, I expect that Ctrl+Enter would press the default submit button.
- [TW-559](#) Perforce Client Spec. Using mapping defined in the client or specify mapping for the project

### Bugs

- [TW-661](#) IE eats 1Gb if left overnight
- [TW-651](#) Do not specify a default of "pom.xml" for the "Path to the pom.xml file:" field when using the Maven2 agent
- [TW-648](#) Massive changelists cannot be applied
- [TW-549](#) Execute property in Subversion checkout not getting respected
- [TW-514](#) Checkin empty directorues in subversion
- [TW-407](#) SVN: Pending changes 1, files 0 - fixed
- more fixes

## Build 1481 -> 1492 (beta)

### Features

- Window Tray Notifier
- Server-side inspections Runner, view inspections results in IDEA plugin
- More Web-UI fixes

### Bugs

- [TW-592](#) Build Agent Working Repository Out of Sync
- more fixes

## Build 1457 -> 1481

### Features

- Web-UI design (in progress)
- [TW-469](#) IDEA Runner
- [TW-195](#) Ability to configure notifications at the user level
- [TW-37](#) Intelligent BuildQueue handling

## Bugs

- [TW-578](#) Error when trying to do checkout in CVS
- [TW-505](#) Personal builds should not have 'Already fixed in' stuff.
- [TW-552](#) rpc-port error - port in use
- others..

## Build 1438 -> 1457

NOTE: You'll have to update your build scripts and replace 'next.build.id' with 'build.number' and 'next.sucessful.build.id' with 'successful.build.number'

## Features

- [TW-130](#) Code Coverage: IDEA plugin  
To use it, follow these steps:
  1. Create a TeamCity project named after IDEA ipr file name (without .ipr part)
  2. Create an Ant-based Build configuration in this project with enabled coverage (use checkbox on build configuration settings page)
  3. Install TeamCity IDEA plugin from "My Settings" page
  4. Open in IDEA your project
  5. Run build configuration on TeamCity server
  6. When build is finished, use Ctrl-Alt-F6 shortcut in IDEA to view coverage information, generated by TeamCity
- [TW-453](#) "system.next.build.id" is confusing  
NOTE! You'll have to update your build scripts and replace 'next.build.id' with 'build.number' and 'next.sucessful.build.id' with 'successful.build.number'
- [TW-201](#) Support verbose option for Ant

## Bugs

- [TW-553](#) Server hangs due to confusion in registering agent
- [TW-554](#) Creation of MySQL database fails
- [TW-551](#) Exception when install agent via JWS
- [TW-555](#) Rename of project causes agent builds to fail
- [TW-437](#) "Invalid parameters" message after canceling build
- [TW-513](#) Notification email messages are sent with bad date
- many others

## Build 1382 -> 1438

NOTE: After the upgrade you'll have to update settings in jabber-config.xml and email-config.xml files. Sorry for inconvenience.

## Features

- [TW-252](#) Remote build and deferred commit access via "Commit Project" panel
- [TW-455](#) .exe installer for build agents
- [TW-126](#) Enable Code Coverage via Web
- [TW-423](#) Clone/Copy build configurations
- [TW-229](#) Edit Build Agent properties in Swing window while installation
- [TW-315](#) Windows service for build agents
- Show number of "new" failed tests on the overview page while build is running

## Bugs

- Performance improvements
- [TW-291](#) Test erroneously marked as 'already fixed'
- [TW-316](#) Problems with expandable/collapsible blocks on page reload
- [TW-518](#) Configuration messed up when edited with multiple browser windows/tabs
- [TW-484](#) When build was stopped manually, responsibility disappeared

- [TW-502](#) Perforce support does not use client view while applying patches.

## Build 1270 -> 1382

### Features

- [TW-231](#) Administration: Edit/Delete TeamServer projects
- [TW-236](#) Administration: General Parameters
- [TW-237](#) Administration: Edit build configuration requirements
- [TW-238](#) Administration: Edit build configuration parameters
- [TW-239](#) Administration: Build triggering
- [TW-175](#) Problems connecting VCS servers should be handled gracefully and displayed on build status page
- [TW-325](#) Overview Page redesign
- [TW-457](#) VS 2005 solution build
- [TW-428](#) Use "echo" task with special message format to generate progress messages
- Possibility to configure "Guest" account
- [TW-116](#) Ignored tests support for C# builds
- [TW-319](#) Do not differ failed and crashed tests
- [TW-361](#) Final build status should be detected only by return code of the build process.
- [TW-362](#),[TW-427](#) Improve build status text
- [TW-131](#) Manual editing of build numbers used for buildTypes
- [TW-307](#) Make it possible to specify JAVA\_HOME for runner java processes via run-parameters of build configuration

### Bugs

- [TW-262](#) Thread freeze / CPU spike when using ssh keys to checkout from Subversion (SVN)
- [TW-275](#) TeamServer performs full check-out instead of applying patch after the first check-out
- [TW-352](#) Subversion checkout producing different size binary images
- other fixes and improvements

## Build 1075 -> 1270

### Features

- [TW-107](#) Delayed commit from IDEA plugin
- [TW-108](#) Maven2 runner support (see [TeamCity FAQ](#) for configuration details)
- [[TW-189](#)]<http://www.jetbrains.net/jira/browse>
